

## Format

: **Cells** → Lets you set how Numbers are interpreted (such as Currency), set Alignment within the cell (including vertically), set Font attributes, set a Border, set Patterns and colors in cells, and initiate Protection settings.

: **Row** → Lets you explicitly set the Height of each row, or set it to AutoFit to whatever is in the row, as well as Hide or Unhide a row.

: **Column** → Lets you explicitly set the Width of each column, or set it to AutoFit to make it as wide as whatever is in the column, Hide or Unhide a column, or set a Standard Width for columns.
